

# Bespoke Chamber Furnaces

We offer a bespoke design build service here at Vecstar. We can produce any size chamber ranging from 0.2 litres to over 2000 litres, with maximum working temperatures as high as 1800°C.

We offer numerous options such as pneumatic rising doors, controlled either by button or foot pedal, chart recorders, automatic loading facilities and more.

Bespoke chamber furnaces we have produced in the past include rising hearth furnaces, top loading furnaces and large aerospace furnaces conforming to NADCAP (AMS 2750D) requirements.
